Flow Meter Clamp-On ¼" – 2"

Wirelessly measure flow within
¼" – 2" NPS (DN15A-DN50A) pipe
without shutting off water

Features

- Works with Nexa! Nexa remotely connects to your flow meters, and receives real-time system data, empowering insight to identify system inefficiencies + enhance troubleshooting, issue resolution, and system optimization.
- Non-invasive installation and set up ensures that there will be zero impact on the flow system
- The clamp-on style of Nexa prevents pressure losses, contamination, and excessive downtime associated with conventional flow sensors
- The slim design enables mounting in close-proximity or in tight spaces
- Mounts securely in minutes. No pipe modifications are necessary
- Utilizes an ultrasonic signal 20X stronger than conventional models
- Automatically increases its signal strength to blast through harsh build-up for lasting detection
- High water resistance enables use in even the harshest environment, IP65 & IP67 approved

Operation

- Nexa emits and receives two different sets of ultrasonic pulses. One traveling from A to B and the other traveling from B to A. By doing this, Nexa can stably monitor flow by comparing the two signals. This method of detection minimizes the effects of any external factors.
- Build-up or rust on the inside of a pipe can become problematic over time for conventional sensors. Nexa automatically adjusts its power to compensate for build-up and provide long periods of stable detection.

Applications

- Domestic hot water pipes, risers, branches and returns
- Cold water lines
- Boiler and chiller supply and return
- Additional applications

Sizes (pipe outer diameter)

- 80070031: ¼ – 3/8" (13mm – 18mm)
- 80070032: ½ – ¾" (18mm – 28mm)
- 80070041: 1 – 1 ¼" (28mm – 44mm)
- 80070010: 1 ½ – 2" (44mm – 64mm)

Compatible Pipe Materials

- Copper, Iron, Stainless Steel, PVC, Resin

Tools Needed

- No special tools, parts or knowledge required
- Easily mounts with just a Philips screwdriver
- Bracket attaches with only four screws

Measure water flow from the outside of a pipe using high frequency acoustics through a variety of sizes, materials, and pipe thicknesses.

Important: Nexa Flow Meters must be installed with a Nexa Connection Kit which communicates to the cloud and Nexa platform. Please refer to the Nexa Connection Kit User Guide (UserGuide-N-ConnectionKit 2410), found at nexaplatform.com/hardware-support

¹ Liquid must allow for the passage of an ultrasonic pulse, as well as not contain large air pockets or excessive bubbles. Detection may be instable on certain non-standard pipes (i.e., lined pipes)

² Contact Nexa when the temperature of the pipe is greater than 185°F (85°C) at support@nexaplatform.com

³ The zero cut flow rate can be changed in the settings. When using the unit with a low flow rate range, perform an origin adjustment when the fluid is not moving if you change the zero cut flow rate.

⁴ This specification is valid when the flow velocity distribution is stable. This value does not take into account the effects of pulsation or fluctuations in flow velocity distribution due to facility factors. Convert the F.S. (full scale) listed in the table according to the rated flow range.

⁵ IO-Link: Compatible with Specification v1.1 COM2 (38.4k bps). Contact Nexa for support at support@nexaplatform.com

⁶ When including the load current, please add 200mA to this value.

Pulse Counter Connection Kit

Allows for wireless 900MHz communication from flow meter to local gateway to the Nexa cloud platform.

The flow meter is connected wirelessly to a local Nexa gateway and powered through the pulse counter connection kit (PCCK). Using a 900MHz signal, the kit allows for superior wall penetration and is subject to less interference than other higher frequency communication means typical in IoT systems.
